

X-WING FIGHTER

The X-wing Fighter quickly proved to be one of the most effective military aircraft in the galaxy. The unusual wing design of the T-65 is frequently regarded as the success formula of the space ship. The pair of twin wings remains closed during normal flights under the speed of light. In combat and on entry into the atmosphere of a planet, they can be extended. On the wing tips are high-energy laser cannon that can be fired singly, simultaneously, in pairs or in other combinations.
