

M16 Halftrack

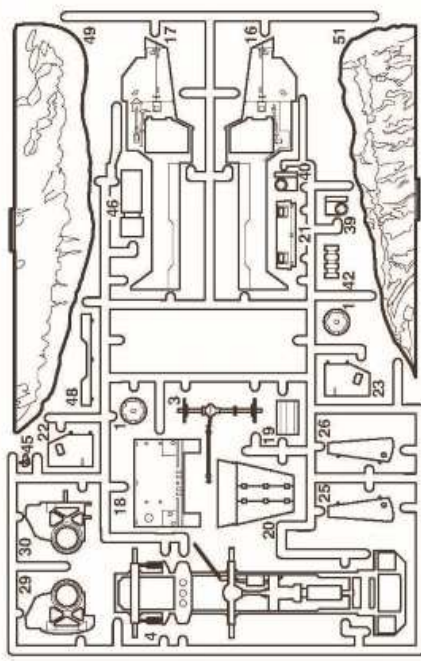

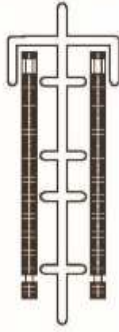

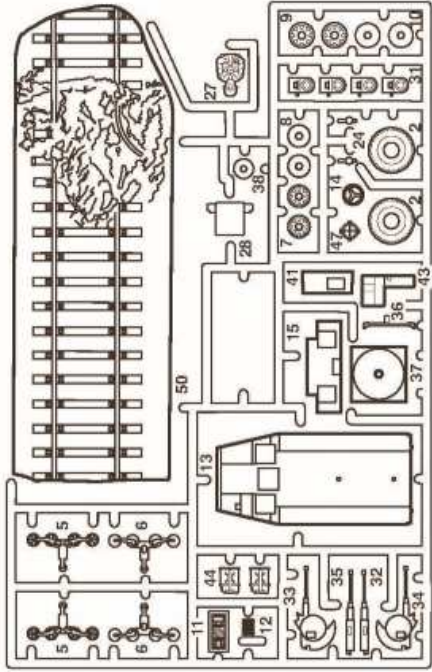

Das amerikanische M16 Halftrack wurde im Jahr 1942 auf Grundlage des M3 Halftrack als eine Flugabwehr-Plattform entwickelt und bis 1943 in einer Gesamtanzahl von 724 Fahrzeugen hergestellt. Eingesetzt zum Schutz von Panzer- und Infanterieeinheiten gegen Angriffe der gegnerischen Luftwaffe, hatte diese Waffe einen überwältigenden Erfolg. Die Vierlingsflak bestand aus 0,50 Kaliber Maschinen- gewehren, die sich auf einem Maxson-Gefechtssturm mit den bekannten Munitionskanistern an der Seite, befanden. Trotz der alliierten Luftüberlegenheit gegen Ende des 2. Welt- kriegs, kämpfte die deutsche Luftwaffe weiter außerordent- lich Tapfer gegen die Rheinüberquerung der alliierten Truppen, wodurch das M16 Halftrack seine hohe Leistungsfähigkeit unter Beweis stellte.

M16 Halftrack

The American M16 half track was developed in 1942 from the M3 half-track as an anti-aircraft platform and by 1943 a total of 724 had been built. Used to protect tank and infantry units against enemy air attacks, these weapons were an overwhelming success. The four-barrelled AA gun consisted of 0.50 calibre machine guns mounted on a Maxson turret with the usual ammunition canisters on the site. Despite Allied air superiority towards the end of World War II, the German Luftwaffe continued to fight extremely bravely against the Allied troops crossing the Rhine, during which time the M16 half-track demonstrated its great capabilities.
