Titanic Searcher „Le Suroît“

Die Le Suroît ist ein Forschungsschiff des französischen Meeresforschungsinstituts Ifremer. Bekanntheit erlangte das Schiff, als es 1985 an einer aus zwei Schiffen bestehenden Expedition zur Suche des Wracks der Titanic beteiligt war. Nicht zuletzt dank des damals neuartigen Sonars (Sonar Acoustique Remorqué, kurz: SAR) konnte das Wrack im am 1. September 1985 gefunden werden. Es befindet sich auf Position 41° 43' 55" N, 49° 56' 45" W in einer Tiefe von 3.803 Metern. Das schleppbare Seitensicht-Sonar konnte zu dieser Zeit Bilder des Meeresbodens von ungekannter Qualität erzeugen.

Titanic Searcher „Le Suroît“

The "Le Suroît" is a French Marine Research Vessel operated by the Ifremer Marine Research Institute. The ship rose to fame in 1985 when it was involved in a two-ship expedition to search for the wreck of the Titanic. The wreck was found on 1 September 1985 thanks in part to the then novel Sonar (Sonar Acoustique Remorqué, in short: SAR). It is located at position 41° 43' 55"N, 49° 56' 45"W at a depth of 3803 metres (12475 ft). The towable side-scan sonar was at this time able to produce images of the seabed in unprecedented quality.

Vor dem Zusammensetzen gut durchlesen!

Dr. Adolph: Jedes Teil ist in mindestens (1). Rohstoffe der Hauptgüterklasse. Jedoch: Benötigte Werkzeuge, Röhren und Teile von Bauteilen und Baugruppen der Klasse (2) Grundstoffe, Halbfabrikat und Fertigfabrikat zum Zusammenbau der gebildeten Bauteile (3). Funktion ist einer dieser Aspekte (4) ist ein Teil des Leift Traktors, damit der Fahrer mit der Maschine und die Auswärtigen besser helfen. Vor dem Ausfahren prüfen wir das System, Klebstoff speichert auftragend (5) Füllen getrocknetes Material auf. ONE ATTACHEMENT: Read the instructions thoroughly prior to assembly. Each component is numbered (1). Adhere to specified sequence for assembly. Tools required: lathe and file for removal of components from frames (2); rubber band, adhesive tape and glue for attaching components together after applying adhesive (3). Clean plastic components in a mild detergent solution and allow to air-dry in their paper and translucent culture bottles prior to applying adhesives. Check to see whether the components fit together; apply adhesive sparingly. Remove droplets and paint from the coating surfaces. Fold small components before inserting them from the frames (4) (5). Allow paint to dry well, and only then can continue to assemble. Get set each transfer individually and handle in warm water for 10 seconds. Seal transfer on back and lay designated positions, then press on with the long paper.
